

GOALOS

The Autonomous GoalOS Experience Blueprint

How to make the regular-person experience run itself safely at scale

AI makes action cheap. GoalOS makes progress provable.

A super practical path for regular people to use AI, collect proof, and turn what works into reusable capability.

The safe money-machine loop

Acquire -> Activate -> Act -> Prove -> Publish -> Share -> Convert -> Improve

The autonomous money machine is not "AI magically earns money for people." The safe version is a system that repeatedly helps users pick goals, take bounded actions, collect proof, share wins, convert to paid plans, and improve templates based on evidence.

Loop step	Automation	Human feeling
Acquire	Landing page, posts, referral links, free 30-day challenge.	"This sounds useful and safe."
Activate	Form turns goal into GoalOSCommit and daily plan.	"I know what to do."
Act	Daily AI-assisted action prompt.	"This is easy enough to do today."
Prove	Upload screenshots, links, replies, notes.	"I can see progress."
Publish	Public-safe Evidence Docket draft.	"I have something I am proud to share."
Share	Share link, badge, progress card.	"This shows I did something real."
Convert	Offer subscription, cohort, template, review.	"I want the next sprint."
Improve	Aggregate learnings update templates.	"The system gets smarter."

What to automate immediately

Function	Automate?	Boundary
Goal drafting	Yes	User confirms the GoalOSCommit.
Daily action plan	Yes	Actions must be bounded and honest.
Proof reminders	Yes	User controls what is uploaded.
Evidence Docket draft	Yes	Public-safe by default.
Selection suggestion	Yes	Human approves promote/retry/reject.
Public claim	Human review	Avoid false income or outcome claims.
Payments and subscriptions	Yes	Use ordinary payment processor.
Template promotion	Semi-autonomous	Promote only if multiple users produce proof.

30-day launch target

Metric	Target
Beta users	100
GoalOSCommits created	70+
ProofPackets submitted	100+
Completed Evidence Dockets	25+
Shareable proof pages	10+
Paid conversions	5-15
Aggregate proof report	1

The proof-growth flywheel

Proof creates trust. Trust creates sharing. Sharing creates growth. Growth creates more data. More data creates better templates. Better templates create better outcomes. Better outcomes create more proof.

The moat is not the prompt. The moat is the evidence graph of what actually works for people.

Sources and claim boundary

This pack is practical guidance, not a guarantee of income, job outcomes, investment returns, health outcomes, legal advice, tax advice, financial advice, or proof of achieved AGI/ASI. It is a way to structure AI-assisted action so that progress can be checked against evidence.

- Paul Graham, "How to Earn a Billion Dollars" (June 2026): used as inspiration for growth rate, user love, and the importance of making something people like enough to tell friends.
- AGI ALPHA: A Scalable Substrate for Intelligence Organizations: used for the idea that model capability becomes valuable when converted into verified machine labor and reusable capability.
- GoalOS: The Proof-of-Evolution Constitution / AEP-001: used for Aim -> Act -> Prove -> Evolve, Evidence Dockets, Proof-Carrying Artifacts, Selection Gate, and proof-backed upgrade rights.

Claim-safe motto: no proof, no progress; no evidence, no upgrade; no rollback, no scale.
